Stud Dog Contract

Bitch's Name: _____

AKC# _____ **UKC#** _____ **AWSA#** _____ **Other#** _____

Microchip# _____ **Tattoo#** _____

Owner of Bitch: _____

Co Owner of Bitch: _____

Address: _____

Day Phone# _____ **Night Phone#** _____

Email Address: _____

Date of Bitch's last heat: _____

Foxhunt White Shepherds offer stud service to approved bitches only. Our Stud Fee is **\$1000.00** and must be paid at the time of the **breeding**. If arrangements have made prior to the breeding for a pick of litter puppy in lieu of a stud fee, this contract must reflect that agreement and be agreed upon by the owner of the dam and the owner of the stud dog prior to the stud service.

Approved bitches must have good temperaments, we will not service a bitch that shows shyness, aggressive behavior or is not approachable. Approved bitches must have a current brucellosis test and have some form of hip & elbow certification, ie.. OFA, PennHip or an "A" Stamp, so that we may be assured that no hip or elbow dysplasia is confirmed by the report(s). If we approve your bitch you must provide us with a copy of her AKC registration certificate, UKC registration certificate (if the bitch is UKC registered), 4 generation certified pedigree and hip/elbow certifications.

Owners of bitches to be bred to a Foxhunt stud dog agree that no offspring from a resulting litter may be sold or given to anyone who has the intent to breed to a wolf, wolf hybrid, or any agent, pet shop, guard dog business or laboratory/research facility.

You further agree that you are breeding your female for the right reasons, you realize and agree that you are responsible for every puppy produced by your planned breeding(s), and are sure you are prepared for that responsibility and that you are genuinely trying to better the breed with this breeding. You agree you are sure you are financially prepared to properly care for the puppies until they are placed in their forever homes.

We prefer that you bring your female to us **BEFORE** she is in standing heat and that she stay with us the entire time she is in standing heat. When these conditions are met, we will sign a statement that your female has been bred to our stud dog of your choice and that no other males have been allowed near her. A fee of **\$7 per day boarding** will be charged for each day the bitch is left here for the breeding. (You will provide us with her dog food.) We will put your bitch in with our stud dog daily, your bitch will be hand bred each and every time she is placed in with our stud dog so as to witness every breeding that takes place, you are welcome to be present at any or all breedings. We will not leave the bitch and stud dog together on a constant basis so as not to cause unnecessary stress or excessive riding of the bitch. We will notify you when she is no longer standing for our stud dog. If the bitch is left here for the breedings, the stud fee is due when you pick her up unless we have agreed to accept the pick of the litter in lieu of stud fee.

If this breeding is being done with fresh chilled semen, the Dam owner will also be responsible for all vet fees including the collection of our stud dog.

If you prefer to transport your bitch to us for each breeding, you will be required to pay the stud fee at the time of the first breeding. However, if you choose to bring your bitch back and fourth, we will not accept a puppy in lieu of stud fees unless the puppy is DNA-P at the dam owner's expense prior to us accepting the puppy. It is up to you whether or not you bring your bitch back for more breedings during her standing heat. You are welcome to bring your bitch every other day until she is no longer standing for our stud dog. If you bring your bitch to us already in standing heat, or if you choose to transport her back and forth to us for the breedings only and take her back home in between the breedings, you must sign a statement that the bitch has been in your care during the entire heat cycle and that you witnessed the breeding of her and our stud on the specified date(s) and time(s) here at Foxhunt White Shepherds.

We will provide you with signed AKC, UKC & AWSA litter registration forms they will be given to you once the stud fee is paid in full and not before. If we have agreed to the arrangement of choosing a puppy in lieu of stud fee, if you prefer

the stud fee can be paid at the time of the breeding and then be reimbursed back to you when we pick up our puppy (this allows you to go ahead and register the litter), or you can wait to register the litter until after we have taken possession our puppy, in which case we will sign the litter registration when we come to pick up/ship our puppy. If we must ship our puppy, the cost of shipping will solely be our responsibility, you agree however to deliver our puppy to the nearest airport from where the puppy can be shipped. We will upon arrival of our puppy, immediately send you through the US postal service, all signed litter registration forms. You agree to provide to us, all our puppy's litter registration papers in a timely manner once you receive them.

If Foxhunt White Shepherds does in fact agree to take a puppy in lieu of our stud service fee, we will pick our puppy at 7 weeks of age. Since we will have first pick of the litter, no puppies should be reserved to other puppy buyers, family members, ect... until **AFTER** we choose our puppy. We agree to choose our puppy at 7 weeks of age, if you have a buyer wanting to choose his/her puppy prior to our choosing at 7 weeks of age, be sure to have them choose a first and second choice in case we choose the same puppy. You agree to have the entire litter vet checked at 6-8 weeks of age to rule out heart murmurs, umbilical hernias, overshot or undershot bites, and other health conditions PRIOR to our choosing our puppy. Written documentation by the Veterinarian of litter's Health Exam is to be provided to us when we come to pick out/ship our puppy.

We are always happy to answer any questions or concerns you may have about what is involved with and what your responsibilities are in raising a litter of puppies and we will also help assist you in finding forever homes for your puppies, by recommending your available litter on our website and also by referring potential puppy buyers that contact us, to you. If you wish to use the services of our website, you must agree to provide your puppy buyer's with a puppy contract out lining our agreement in this contract pertaining to the puppies well being and also containing a health guarantee, you agree to provide to your puppy buyer's a veterinarian's health certificate for each puppy and all applicable litter registration forms, health records, ect... we must feel comfortable & secure recommending you to potential puppy buyers .

UKC/GRCH STARR SUREFIRE SUPERHERO OF FS CANINE / GERMAN SHEPHERD	Reg. #: DN13826902 Microchip: 094*016*626 AVID
Date of Birth: 9/29/2005 Sex: M Weight: 87 lbs. Age: 15 mo.	Tattoo:

RESULTS			
LEFT	Distraction Index (DI)	0.30	DI is less than or equal to 0.30, with no radiographic evidence of DJD.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	
RIGHT	Distraction Index (DI)	0.29	DI is less than or equal to 0.30, with no radiographic evidence of DJD.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	

Please note that the PennHIP DI is a measure of hip joint laxity, it does not allude to a "passing" or "failing" hip score.

LAXITY PROFILE RANKING									
The laxity profile ranking is based on the hip with the greater laxity (DI). This interpretation is based on a cross-section of 7,103 CANINE animals of the GERMAN SHEPHERD breed. The median DI for this group is 0.40.									
Percentiles									
	90th	80th	70th	60th	50th	40th	30th	20th	10th
> 90th					Median				< 10th
	↑								
The chart above indicates the ranking of your animal's passive hip laxity (DI) in relation to all CANINE animals of the GERMAN SHEPHERD breed in our database. This result means that 1) your animal's hips are tighter than approximately 90% of this group of animals (alternatively, 10% of the group has tighter hips than your animal), and 2) your animal's hip laxity is in the tighter half of the laxity profile. Breed-specific evaluations are analyzed semi-annually. Consequently, the average laxity and range of laxity for any given group will change over time.									

PennHIP does not make specific breeding recommendations. Selection of sire and dam for mating is the decision of the breeder.

NOTE: As a minimum breeding criterion, we propose that breeding stock be selected from the population of animals having hip laxity in the tighter half of the breed (to the left of the median mark on the graph). Higher selection pressure equates to more rapid expected genetic change per generation.

By implementing selection based on passive hip laxity, we expect the breed average DI over the years to move toward tighter hip configuration, meaning lower hip dysplasia susceptibility. The PennHIP database permits scientific adjustment of criteria to reflect these shifts; the average laxity and range of laxity for a particular breed will change over time.

MDR1 Genotyping Results

OWNER
 Scarlett Sanders

The following dogs have been tested for the Multi-Drug Sensitivity mutation.

Mutant / Mutant

None

Mutant / Normal

E Litter Turquoise Collar
 E Litter Green Collar
 E Litter Black Collar
 E Litter Lavender Collar
 E Litter Yellow Collar

Normal / Normal

Starr Surefire Superhero O/F's
 E Litter Red Collar
 E Litter Blue Collar
 E Litter Pink Collar
 E Litter Dark Pink Collar
 E Litter Light Blue Collar

Explanation of test results:

Mutant/Mutant- These dogs carry the mutation and can not pass on a normal gene to their offspring. These dogs would be expected to experience toxicity after normal doses of loperamide (Imodium(r)), and some anticancer drugs, and high doses of ivermectin (greater than 50 micrograms per kilogram).

Mutant/Normal- These dogs carry the mutation and may pass on the mutant gene to their offspring. These dogs may experience toxicity after normal doses of loperamide (Imodium(r)), and some anticancer drugs, and high doses of ivermectin (greater than 50 micrograms per kilogram).

Normal/Normal- These dogs do not carry the mutation, and will not pass on the mutation to their offspring. These dogs would not be expected to experience unexpected adverse drug reactions to normal doses of ivermectin, loperamide (Imodium(r)), and some anticancer drugs.

Current list of drugs that have been documented to cause problems:

Ivermectin (Antiparasitic agent)
Loperamide (Imodium(r); over-the-counter antidiarrheal agent)
Doxorubicin (Anticancer agent)
